

## Laser glasses for red laser

Increase the visibility of red lasers

Light and thin

High-definition visual

A sense of comfortable

Triple protection

Dims all other colors, but leaves the red color, from e.g. Elma cross and line lasers, shine through clearly. Increases the visibility of our red lasers considerably, in low light conditions, where e.g. strong lighting makes it difficult to read laser markings.

Also dramatically increases the visibility of the dot when using line lasers.
