

Bun hygro

Part of cloud-based data/alarm system from Loggerflex

Bun Hygro is a smart little device that can log and monitor temperature (-25 to 70°C) and relative humidity (0 to 100% RH), providing an easy overview, while also being easy to notify if something is off for normal. Bun hygro is IP54 and can handle overspray with water and can handle a little dust.

All the Bun products are easy use wi-fi. Adjustable upload and log interval provides the possibility of ultra-long battery life. It provides a good overview, and it is possible to share to several and different alarm intervals on different devices. Bun helps you with the best overview, which makes it the perfect tool for collecting data over time.

It can send emails, text messages and more. You have access to the history, graphs and periodic reports on any platform. Reports and graphs can also be extracted with just a few clicks.
