FLIR A400

320x240 pixel

FLIR A400 Thermal Image Streaming Cameras offer the monitoring capabilities needed to accurately detect and identify thermal issues across manufacturing and industrial processes. With multiple field-of-view choices, multi-streaming capabilities, motorized focus control, and optional compressed radiometric streaming over Wi-Fi, these fixed-mount camera solutions can tackle the most complex remote monitoring objectives. Easy configuration allows you to tailor this monitoring system to your company's quality, productivity, maintenance, and safety needs.

The FLIR A400 Thermal Smart Sensor Camera has the features automation solution providers need for complex monitoring applications, including elevated skin temperature screening when used as an adjunct to other body temperature screening tools, critical infrastructure, product quality, and early fire detection. The Smart Sensor configuration includes multiple measurement tools and alarms while also providing computing-on-the-edge, with analytics performed at the camera level for immediate results. With a range of lens choices, motorized focus control, and unrivaled connectivity, A400/A700 cameras offer unmatched power and flexibility. Easy configuration allows you to tailor this monitoring system to your company's quality, productivity, maintenance, and safety needs.
