

Phantom VEO4K 590

Phantom 4K imaging standards are known for delivering crisp and consistent results in the Media and Sports Broadcast industries. The Phantom VEO4K 590 brings those standards to scientific and research related applications.

The unique 4K high-resolution sensor is available in color or monochrome. This ensures that image professionals can analyze fine details without compromising speed and function.

User flexibility and workflow are increase through quickly interchangeable lens mounts. The VEO4K sensor is 35mm and the camera can utilize industry standard Nikon, PL, C, and Canon EF (with electronic control) mounts.

The VEO4K 590 housing, like all VEO cameras, is compact, lightweight (6 lbs/2.8 kg), and ruggedized to increase the durability in harsh environments. Both body styles - the L (light, found in laboratory settings) and the S (full, found where extra controls and features are needed) - are milled from aluminum and have the sensor and internal components protected to ensure that airflow does not allow dust and other environmental hazards onto the electronics. This helps ensure long-time reliability.
