## Phantom S641

The Phantom S641 supports cutting edge machine vision applications with up to 6 Gpx/sec throughput and many ease-of-use and efficiency features. Two simple, easy-to-use fiber cables carry up to 48 Gbps of images and data to frame grabbers. The S641 also accommodates high frame rate applications that require just one 40 Gbps fiber cable, for added simplicity. Two Regions of Interest (ROI) are available, increasing efficiency and flexibility. A mechanical shutter and EOS lens compatibility allow remote black referencing and focus control to improve image quality. The S641 also comes with GPIO ports for Trigger and signaling.
